Production Planning

This course is widely regarded as the best instructor-led course to give delegates an introduction to the principles of Operations Management and Supply Chain Management. It is suitable for those working in the field who want to obtain or update their professional knowledge, those entering this field or working in a related field such as Purchasing, Accounting, Marketing or Engineering as well as the valuable positions 'on-the-ground' i.e. planners, schedulers, material handlers etc.

Benefits of attending this courses

The learner will better understand the principles and techniques applicable in the practice of Supply Chain and Inventory Management. In this course we explore the relationship between good planning and the whole of the supply chain. Planning includes demand planning and forecasting, material planning, capacity planning, production planning and scheduling. After attending this course, the delegate will have gained a deep understanding of the connectedness of the supply chain and all of its functional areas.

Course Options

- Classroom Facilitated – can be conducted on-site. Talk to us about this option
- Public courses – check the latest schedule for dates
- Digital Blended Learning – Download your text books and attend revision sessions
